

Restylane Under Eye Enhancement

What to expect:

-You can enjoy the results immediately, but expect a small amount of swelling in the area around your eyes. This can last 1-3 days.

What you need to do:

-For the next day or two, do your best to keep your head slightly elevated when sleeping in bed. Prop your head up on a couple pillows or raise the head of your bed. This will help with swelling.

-Optional: gentle ice on your eyes up to 3 times today. You can leave the ice on each time for about 5 minutes.

What you shouldn't do:

-Avoid any strenuous activity (gym, running, yoga, etc.) for the next day or two. This will also help with swelling around the eyes.

Things to look out for:

-Some more significant swelling or puffiness of the eye is normal. This is a very delicate area and the act of injecting it can cause noticeable swelling. This will resolve in 1-3 days.

-Some small amount of bruising around the eyelid can occur from the injection. This can track from the lower eyelid area down into the cheek. This will resolve in 2-5 days.

-Any vision changes, including blurriness is extremely rare. If you experience any changes, please call the office
